DEPARTMENT OF HOME SCIENCE

REPORT ON EDUCATIONAL VISIT TO THE FAMILY COURT

Understanding Court Procedures and the Pleading of Family Cases

Date	26 November 2025
Venue	Family Court, Aurangabad
Participants	Third-Year Students
Organised by	Department of Home Science

Introduction

The Department of Home Science organised an educational visit to the Family Court, Aurangabad, on 26 November 2025 for Third-Year students. The visit was designed to provide practical exposure to the working of a Family Court and to help students understand how family-related matters are filed, presented, heard and resolved through the judicial system.

The activity was closely connected with the Home Science curriculum, particularly the areas of family relations, child development, counselling, women and child welfare, human development and community support. It enabled students to connect classroom learning with the legal and social realities faced by families.

Objectives of the Visit

- To familiarise students with the structure and functioning of a Family Court.
- To explain the roles of judges, advocates, counsellors, court staff and litigants.
- To help students understand how family cases are filed and pleaded before the Court.
- To create awareness about legal procedures related to marriage, maintenance, custody and family disputes.
- To highlight the importance of counselling, mediation, confidentiality and peaceful dispute resolution.
- To sensitise students to the emotional, social and financial difficulties experienced by families involved in litigation.

Proceedings and Learning Experience

Under the guidance of faculty members, the students were introduced to the organisation of the Family Court and its different functional sections. They learned that Family Courts handle sensitive matters such as marital disputes, divorce, maintenance, child custody, guardianship and other issues affecting family relationships. They were informed that the purpose of the Court is not limited to deciding disputes; wherever possible, it also encourages reconciliation and a mutually acceptable settlement.

The procedure followed after a matter is brought before the Court was explained to the students. They learned how a petition is filed, scrutinised and registered; how notice is issued to the opposite party; and how both parties are allowed to present facts, documents, evidence and arguments. The meaning of pleading a case and the professional responsibilities of advocates representing their clients were also discussed.

1	Filing and registration of the petition or application
2	Issue of notice and appearance of the concerned parties
3	Counselling or mediation, wherever considered appropriate
4	Presentation of facts, documents, evidence and arguments
5	Consideration of the matter and passing of an order or judgment

Role of Counselling and Mediation

A significant part of the learning experience was understanding the role of counselling and mediation. Students learned that Family Courts often attempt to resolve disputes amicably, particularly when the welfare of children and the long-term stability of the family are involved. Counselling enables parties to communicate their concerns in a supportive setting, while mediation helps them explore a mutually acceptable solution. The visit reinforced the importance of empathy, patience, professional ethics and confidentiality while working with families in distress.

Relevance to Home Science

The visit enabled students to understand that family problems often involve legal, emotional, psychological, financial and social dimensions. They connected the experience with areas such as Human Development, Family Relations, Child Development, Guidance and Counselling, Women's Rights, Child Protection, Family Welfare and Community Development. The visit also introduced them to possible professional roles in counselling centres, child-welfare agencies, women's support services, legal-aid initiatives and community organisations.

Learning Outcomes

- Developed a basic understanding of the structure and functioning of a Family Court.
- Understood how family-related cases are filed, heard and pleaded.
- Learned about the responsibilities of judges, advocates, counsellors and court officials.
- Recognised the importance of documents, evidence, fair hearing and professional conduct.
- Appreciated the role of counselling and mediation in resolving family disputes.
- Developed sensitivity towards families experiencing conflict and legal difficulties.
- Connected theoretical classroom concepts with real legal and social-welfare practices.

Students' Response

The students found the visit informative, practical and meaningful. They observed the formal discipline of the Court and showed keen interest in understanding how different cases move through the judicial process. For many students, it was their first direct exposure to a court environment. The activity helped remove misconceptions about court proceedings and encouraged a responsible understanding of family welfare, legal rights and dispute resolution.

Conclusion

The educational visit to the Family Court was a valuable experiential-learning activity. It successfully provided Third-Year students with practical knowledge of the functioning of the Court and the manner in which family cases are presented and pleaded. It also highlighted the importance of legal awareness, counselling, mediation, dignity, confidentiality and empathy. The Department of Home Science expresses sincere gratitude to the Family Court authorities, faculty members and everyone who supported and facilitated this educational visit.

DEPARTMENT OF HOME SCIENCE

REPORT ON COOKING COMPETITION

Developing Culinary Skills, Creativity and Presentation

Date	27 December 2025
Venue	Department of Home Science
Activity	Cooking Competition
Organised by	Department of Home Science

Introduction

The Department of Home Science organised a Cooking Competition on 27 December 2025. The activity was planned to provide students with an opportunity to demonstrate their culinary knowledge, practical skills, creativity and ability to present food attractively. It created an engaging learning environment in which theoretical understanding could be applied through practical preparation and display.

The competition encouraged participants to plan their dishes carefully, select appropriate ingredients, follow hygienic practices and pay attention to taste, texture, colour and presentation. The displays reflected enthusiasm, thoughtful preparation and an appreciation of food as both a nutritional necessity and a creative art.

Objectives of the Competition

- To develop confidence and competence in practical food preparation.
- To encourage creativity, innovation and attractive presentation of dishes.
- To reinforce the importance of cleanliness, hygiene and safe food handling.
- To promote planning, time management, organisation and responsible use of resources.
- To help students understand the relationship between taste, nutrition, texture and appearance.
- To provide a platform for students to display their skills and learn through observation.

Conduct of the Activity

The participants prepared and arranged their food items for evaluation. Each display was presented neatly with attention to serving style and visual appeal. A variety of sweet and savoury preparations could be observed, accompanied by thoughtfully arranged bowls, plates and decorative elements. The presentation demonstrated the participants' efforts to make the dishes appealing while maintaining order and cleanliness.

The food items were observed and assessed with attention to important culinary qualities. The interaction around the displays allowed participants to explain their preparations and reflect on the choices made during planning, cooking and presentation. The activity also encouraged appreciation of one another's work and created a positive atmosphere of learning and healthy competition.

Suggested Evaluation Areas

Area	Focus of Evaluation
Taste and Flavour	Balance, palatability and suitability of flavours
Texture and Preparation	Correct cooking, consistency and technical skill
Presentation	Neatness, colour combination, serving style and visual appeal
Hygiene	Clean handling, orderly workspace and safe serving practices
Creativity	Originality, thoughtful use of ingredients and presentation ideas
Nutritional Value	Awareness of ingredients, balance and suitability of the dish

Learning Outcomes

- Improved understanding of food preparation and presentation techniques.
- Greater awareness of hygiene and safe food-handling practices.
- Development of creativity, confidence and decision-making skills.
- Better planning, organisation, teamwork and time-management abilities.
- Increased appreciation of the connection between nutrition and culinary practice.

Conclusion

The Cooking Competition was an enjoyable and educational activity that successfully combined practical learning with creativity. It provided students with a meaningful opportunity to apply their knowledge, present their abilities and gain confidence through participation. The Department of Home Science appreciated the efforts of everyone involved in organising and supporting the competition.

DEPARTMENT OF HOME SCIENCE

REPORT ON INTERACTION SESSION AT ROSE ACADEMY

Child Development: Cognitive Activities and Practical Interaction

Date	2 December 2025
Venue	Rose Academy, Aurangabad
Subject	Child Development
Participants	Class XII Home Science Students
Organised by	Department of Home Science

Introduction

The Department of Home Science organised an educational visit to Rose Academy for Class XII Home Science students as a practical learning activity under the subject Child Development. The visit provided the students with an opportunity to interact directly with young children, observe their responses in a natural classroom environment and understand the role of structured cognitive activities in early development.

The programme was designed to connect theoretical knowledge with practical experience. Through observation, interaction and participation, the students learned how age-appropriate activities can support attention, perception, memory, language, creativity, fine-motor coordination and social confidence among young children.

Objectives of the Activity

- To provide practical exposure to the developmental characteristics of young children.
- To help students observe individual differences in attention, communication, pace and learning style.
- To conduct simple, enjoyable and age-appropriate cognitive activities.
- To develop the students' skills in classroom interaction, guidance and observation.
- To understand the educational value of colouring, identification, matching and visual-response tasks.
- To encourage empathy, patience, positive reinforcement and child-friendly communication.

Conduct of the Interaction Session

On reaching Rose Academy, the participating students were introduced to the school environment, teaching staff and children. The interaction began with friendly communication so that the children could feel comfortable with the visiting students. The students observed how teachers organise the classroom, maintain routines, give instructions and respond to the different learning needs of children.

The Home Science students interacted with the children individually and in small groups. They encouraged the children to recognise familiar pictures, identify colours and objects, follow simple instructions and complete the assigned worksheets. The students supported the children without taking over their work, allowing them to think, choose and respond independently.

Cognitive Activity Conducted

A colouring and picture-recognition activity was conducted as the central cognitive exercise. Children worked with worksheets containing familiar and attractive figures. They observed the pictures, selected suitable colours, controlled their pencil or crayon movements and completed the task according to their own understanding. After completing the activity, the children proudly displayed their work, which promoted confidence and a sense of achievement.

Cognitive Area	How the Activity Supported Development
Attention and Concentration	Children focused on visual details and remained engaged until the task was completed.
Visual Perception	They recognised outlines, shapes, familiar characters and differences between pictures.
Memory and Recognition	Children recalled colours, objects and previously learned concepts.
Fine-Motor Development	Holding and controlling crayons strengthened finger movement and hand-eye coordination.
Decision-Making	Selecting colours encouraged independent thinking and personal choice.
Language and Expression	Interaction encouraged children to name pictures, colours and describe their work.
Confidence and Social Skills	Appreciation and display of completed work encouraged participation and self-confidence.

Observation by the Students

The students observed that every child participated at a different pace and displayed an individual style of expression. Some children worked independently, while others needed verbal encouragement or brief assistance. This helped the students understand that development is individual and that comparison between children should be avoided. They also recognised the importance of clear instructions, a warm tone, appreciation and a safe environment in sustaining children’s interest.

Learning Outcomes

- Understood the connection between cognitive development and classroom activities.
- Gained practical experience of communicating and working with young children.
- Learned to observe attention span, participation, fine-motor control and individual differences.
- Recognised the value of play-based and activity-based learning.
- Developed confidence in planning and guiding age-appropriate activities.
- Understood the importance of encouragement, patience and positive reinforcement.

Students' Response

The participating students found the visit informative, engaging and professionally valuable. They enjoyed interacting with the children and appreciated the opportunity to apply their subject knowledge in a real educational setting. The session helped them understand the responsibilities involved in working with young children and encouraged them to become more observant, patient and responsive.

Conclusion

The interaction session at Rose Academy was a meaningful experiential-learning activity conducted by the Department of Home Science under the subject Child Development. It successfully combined observation, interaction and cognitive stimulation. The visit strengthened the students' understanding of early childhood development and demonstrated how simple, thoughtfully planned activities can promote concentration, creativity, coordination, expression and confidence. The Department expresses sincere gratitude to the authorities and teachers of Rose Academy for their cooperation and support.
